

JavaScript Web Application Development

2journs / 14h

Target audience

- Embed your JavaScript code in a web application
- Master the global window object and basic APIs
- Use the document API to manipulate the structure of a web page
- React dynamically to events
- Use forms
- Use the main APIs (ajax, server-sent events, web sockets) for communication with a backend
- Persist data locally in a web browser
- Improve user experience by running code in the background

Prerequisites

- Developers, integrators, software architects, technical project managers

Course Outline

- Basic knowledge of HTML
- Have taken the course 'JavaScript: language fundamentals' or have equivalent knowledge
